

Prevent Wire Fraud.
Protect Private
Information.

You're responsible for protecting your company's assets and reputation.

With real estate-directed wire fraud listed by the FBI as one of the fastest growing cybercrimes in the United States, that's an overwhelming amount of responsibility.

We can help.

Vialok is your Sentinel Against Wire Fraud

Vialok's settlement security software is a security solution created specifically for the title insurance industry. Now, when parties involved in the closing process make requests for changes, including the sensitive transfer of wire payment information or the alteration of private settlement details, there's a way to authenticate the user immediately, with little effort, and with *certainty*.

COMPREHENSIVE DEVICE-CENTERED AUTHENTICATION

Vialok offers comprehensive user authentication based on not just one factor (like a password) or two factors (like a password and time-based PIN), but MULTIPLE factors-- providing the level of security necessary to protect the sensitive information of your company and your clients.

- DeviceID
- Geographical Location
- Proximity Analysis
- Multichannel Structure
- Velocity
- PKI (tech)
- and a Device Risk Engine with adaptive authentication parameters

DeviceID

Included in our MFA technology is expansive device identification, which analyzes **53** items pulled from multiple layers of a user's device to create a digital fingerprint that is truly one-of-a-kind.

Security of Personal Data

At Vialok, we believe that comprehensive security should never compromise a user's privacy.

Unlike other settlement security software, Vialok does not rely on personal information for authentication. We offer a security solution that protects our customers from wire fraud, *without* risking the security of their personal information or subjecting it to data analytics.

AWARD-WINNING TECH

Vialok is the only settlement security software on the market that's powered by the award winning KeyPASCO® security engine—used by banking institutions all over the world, where the risk of wire fraud is highest.

- Named one of the 10 Best Performing Managed Security Service Providers in 2018 by Insight Success
- Internet Security Provider of the Year 2017- Sweden and Most Innovative Multi-Factor Authentication Technology by GDS Review
- Red Herring Europe Top 100 Winner, 2016
- Winner of the New Product Innovation Leadership Award for Secure Authentication, 2014 by Frost & Sullivan

SOPHISTICATED SECURITY, SIMPLE INTERFACE

SUPERIOR MOBILE SECURITY

Since no authentication information is stored on a user's device and no personal information is required to login, even if a user's cell phone is compromised, there is no risk of a hacker accessing the company's Vialok account. However, Vialok offers an added layer of protection through Mobile SDK technology which guards against the tools and tactics used to hack cellular devices with:

- Rooting & jailbreak detection
- C-Level runtime surveillance
- Double encrypted secure channel
- Complete emulator detection
- Precise device induced risk engine
- 24hr SDK patch response to new attack vectors
- Unlocked boot loader detection
- Biometric authentication (custom preference)
- IoT devices as additional factors

The tech may be complex, but integration of the Vialok platform into your staff's daily routine is simple.

Quick Installation Easy Registration

- The Vialok app is downloaded from our secure website or the mobile app store.
- Users enter the KeyPASCO® generated time-based token.
- KeyPASCO® registers the device instantaneously and identification information is stored on the Vialok secure server.

Big Fraud Protection Little User Effort

- Users do not need to interact with the Vialok platform until they receive a request for a change in settlement documentation.
- The KeyPASCO® Risk Analysis technology will automatically attempt to authenticate the user's credentials. If authentication fails, the user is immediately blocked by our system.
- Users receive immediate notification of devices that did not pass authentication.

The KeyPASCO® Risk Analysis can detect:

- ✓ EMAIL SPOOFING
- ✓ EMAIL PHISHING
- ✓ MITM ATTACKS
- ✓ ROOTING/ JAILBREAKING
- ✓ DEBUGGING
- ✓ CLONING
- ✓ MANIPULATIVE FRAMEWORKS
- ✓ MALWARE

The Vialok platform provides:

- An easy way to confirm or deny settlement changes between all parties
- Instant in-app alert to requested changes
- Instant alerts when accounts are locked
- Documentation of locked accounts that includes user, device, date, and time

You appreciate the comprehensive level of security of KeyPASCO® MFA technology.

Your users will appreciate the frictionless user-experience.

VIALOK SECURITY SOLUTIONS

We offer customizable packages suitable for every agency, from small to enterprise-level businesses. Each solution includes thorough user training, tech support and site administration.

SOLUTION 1. Vialok SECURE PLATFORM

SOLUTION 2. BRANDABLE INTEGRATION
